WELCOME!!

Lloyd Table Company, a proud supporter of today's chiropractors, has established the finest line of chiropractic tables in the world. Table products unique in versatility and function, designed to meet your needs.

SAFETY

Concerned for a safe working and treatment environment, Lloyd Table Company asks that you follow the safety tips below.

- * Be aware of Caution and Warning labels posted throughout the table before operating any functions.
- * Everyone operating the table needs to read the manual and familiarize themselves with all its functions before operating table with patient on it.
- * The McManis pelvic operation is only to be operated by a professional practitioner, educated in the procedure of the flexion distraction and traction on the lower back and spine.
- * A patient should never be unattended, when lying on the table. **NEVER LEAVE A PATIENT ON THE TABLE UNATTENDED!**

Secure the pelvic cushion into all lock positions before allowing patient on or off the table.
(See pages 12 - 17 to lock pelvic rotation, pelvic flexion, and pelvic side bending)

- * The patient should be positioned at or near the center of the table with arms on the armrest cushions.
- * There should be no more than one operator at the controls.
- * The pressure gauge reading should never exceed 800 PSI or drop below 300 PSI
- * Check the tension on all drops before adjusting the patient. (See Page 9)

MAINTENANCE

The following steps should be performed on a regular basis to maintain your Lloyd table in a smooth operating condition and to assure its long life and top quality appearance.

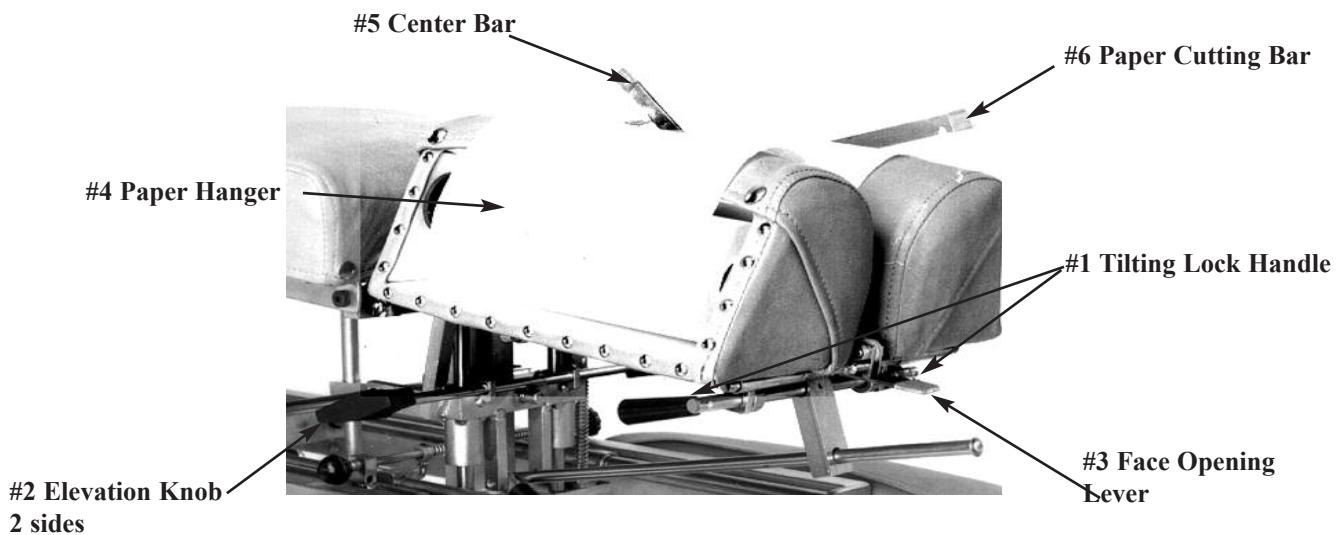

- * An initial inspection and periodic future inspections should be made to insure that nuts and bolts have not loosened in shipping or during daily operations.
- * Your Lloyd table should be lubricated every six months. Parts to be lubricated are all frame pivot points, and metal to metal sliding mechanisms.
(DO NOT LUBRICATE FRICTION LOCKS)
- * The cushions should be cleaned daily with a mild soap & warm water solution to remove body oils. Rinsed & dried.
DO NOT USE VINYL CLEANERS TO CLEAN CUSHIONS!!
- * Chrome parts should be cleaned on a weekly basis for appearance.
- * The hydraulic fluid recommended for the pump, is a lubriplate HO1 or hydraulic jack oil, and should be checked on a yearly basis.
- * Perform periodic inspections for oil leaks or drips.
- * The fluid level in the pump's reservoir tank should measure 1-3/4 of an inch from full. This measurement is taken when the pelvic cushion is in the down position, the pressure gauge is released back to zero, table is in lowest elevated position and fully shortened or retracted.

The following sections provide explanations on the operation of your Lloyd table. All references to right and left, will be in relationship to your view, as you face table from the head end. All references to the front will refer to the head end of the table. Those to the rear will refer to the foot end.

!!

WARNING: THE FOLLOWING PELVIC OPERATIONS ARE ONLY TO BE OPERATED BY A PROFESSIONAL PRACTITIONER, EDUCATED IN THE PROCEDURE OF FLEXION - DISTRACTION AND TRACTION, ON THE LOWER BACK AND SPINE.

Manual Pelvic Flexion Distraction

THE PELVIC FLEXION PRESSURE SHOULD BE CHECKED ON THE GAUGE FOR PROPER SUPPORT AND ADJUSTED BEFORE ALLOWING A PATIENT ON THE TABLE.

To Increase the Flexion Pressure:

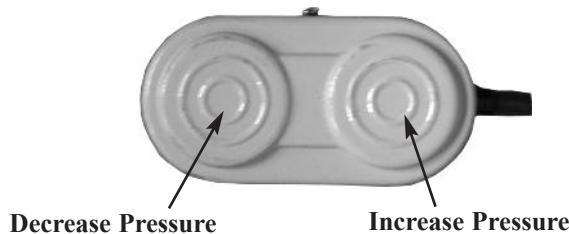

1. Turn the Flexion Lock Handle (Yellow)(No. 3) up to unlock manual pelvic flexion. Activating the cord end of the gray foot pedal will increase the flexion pressure.
2. Observe the Flexion Pressure Gauge (No. 4)  **CAUTION: DO NOT EXCEED 800 PSI**

To Decrease the Flexion Pressure:

1. Turn the Flexion Lock Handle (Yellow)(No. 3) up to unlock manual pelvic flexion. Activating the cordless end of the gray foot pedal will decrease the flexion pressure.
2. Pressure drop can be observed on the pressure gauge.

CAUTION: DO NOT REDUCE BELOW 300 PSI

Pelvic Cushion Flexion - Distraction

Manual Flexion

BEFORE ENGAGING PELVIC FLEXION, BE SURE THE PRESSURE IS PROPERLY ADJUSTED TO SUPPORT PATIENT (SEE FLEXION PRESSURE PAGE 12).

1. Turn the Yellow Flexion Lock Handle (Page 12, No. 3) up to engage manual flexion. Simply push down on the pelvic, ankle cushion, or optional T-Bar to achieve flexion. The Flexion Pressure Gauge pressure should be adjusted to push the patient's weight back up (page 12).
2. To bring the pelvic cushion back to its horizontal position, the operator simply has to let up on the cushion.
3. Once the pelvic cushion is level, turn the Yellow Flexion Lock Handle (Page 12, No. 3) down to lock manual flexion.

BE SURE TO TURN THE YELLOW FLEXION LOCK HANDLE DOWN, LOCKING THE CUSHION IN ITS HORIZONTAL POSITION, BEFORE ALLOWING A PATIENT ON OR OFF THE TABLE.

Semi-Automatic Flexion

The up/down motion of the pelvic cushion can also be performed semi-automatically with the gray foot pedal.

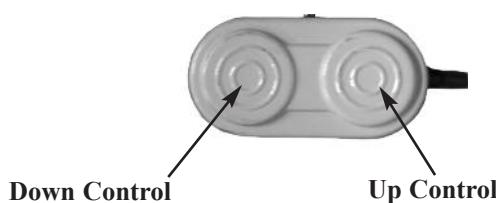

ALWAYS CHECK THE UP/DOWN SPEED OF THE PELVIC CUSHION BEFORE ADJUSTING THE PATIENT. SEE FLEXION SPEED CONTROL BELOW.

1. To activate the semi-automatic flexion depress either side of the gray foot pedal.

Up Control: Press corded side of the gray foot pedal to bring cushion up.

Down Control: Press the cordless Side of the gray foot pedal to bring cushion down.

Up Speed Control: Turn the Up Speed Control (Page 12, No. 1) clockwise to decrease the flexion speed in the up motion.

Turn the Up Speed Control (Page 12, No. 1) counterclockwise to increase the flexion speed in the up motion.

Down Speed Control: Turn the Down Speed Control (Page 12, No. 2) clockwise to decrease the flexion speed in the down motion.

Turn the Down Speed Control (Page 12, No. 2) counterclockwise to increase the flexion speed in the down motion.

Pelvic Cushion Flexion - Distraction

Auto Flexion Preliminary Check

The following steps should be checked before operating auto flexion:

1. The Flexion Lock Handle (Page 12, No. 3) must be in down position to operate auto flexion.
2. Pelvic Side Bending must be locked in the center of table (See Page 16).
3. Optional Pelvic Rotation must be locked into a non-rotated position (See Page 17).
4. Make sure to run a test, checking the flexion depth and speed before adjusting a patient.

ALWAYS CHECK THE UP/DOWN SPEED OF THE PELVIC CUSHION BEFORE ADJUSTING THE PATIENT. SEE FLEXION SPEED CONTROL PAGE 12 & 13.

Auto Flexion Operation Instructions

The Auto Flexion Counter enables you to program the number of repetitions of Flexion - Distraction desired.

1. Spin the Flexion Counter (No. 1) to desired number of repetitions 01 thru 99.
2. Next, push the Counter Load Button (No. 2) to load the number of repetitions dialed.
3. Notice the number dialed now appears on Counter Display (No. 3).
4. After the number has been loaded push the Auto Flexion Start Button (No. 4)
5. The Auto Flexion Stop Button (#5) and Patient Stop Switch (#11) can be used as an emergency shut-off. Once activated, the flexion cushion will stop instantly.

Reset Button

The Reset Button (No. 6) is used to discontinue the flexion motion, and to reset the counter back to zero. When the Reset Button is pressed during the flexion motion, the table will continue through its cycle until it reaches its top position, then stops.

Pelvic Cushion Extension & Retraction

1. To elongate the pelvic cushion simply press the Pelvic Extension (No. 8) button. Press until desired length is obtained, and release.
2. To shorten the pelvic cushion press the Pelvic Retraction (No. 7) button. Press until desired length is obtained, and release.

Pelvic Cushion Flexion - Distraction

Adjusting the Depth of the Up & Down Position

ALWAYS CHECK THE UP/DOWN SPEED OF THE PELVIC CUSHION BEFORE ADJUSTING THE PATIENT. SEE FLEXION SPEED CONTROL PAGE 12 & 13.

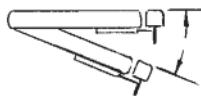

Fig. #1

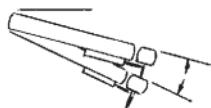

Fig. #2

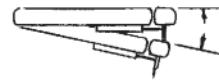

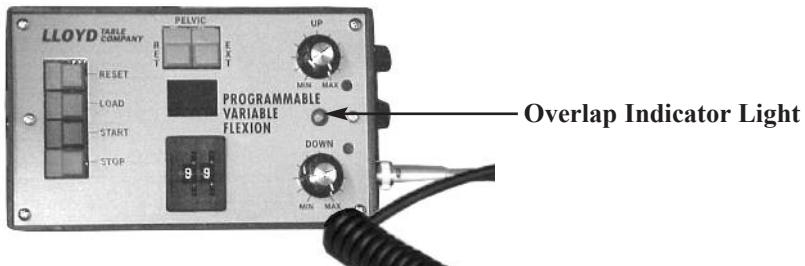

Fig. #3

Fig. #1: When the Flexion Height Adjustment - Up & Down Knobs(Page 14, No. 9 & 10) are turned clockwise to their maximum limit, the pelvic cushion travels to it's maximum flexion distance.

Fig. #2 As the Flexion Height Adjustment - Up knob (Page 14, No. 9) is turned in a counter clockwise direction, the pelvic cushion will minimize it's up travel. The result is a shorter up stroke, keeping the pelvic cushion in the low side.

Fig. #3 As the Flexion Height Adjustment - Down knob (Page 14, No. 10) is turned in a counter-clockwise direction, the pelvic cushion will minimize it's down travel. The result is a shorter down stroke, keeping the pelvic cushion on the high side.

Overlap Indicator

The overlap indicator light shows that the operator has lapped the Up & Down Flexion Modes over one another.

Example: Both the Flexion Adjustment - Up & Down controls are turned to their maximum limit (MAX). The pelvic flexion has been started, and you want to shorten up the stroke. You then turn the up control, back in a counterclockwise direction. When the knob is turned back, the flexion stroke gets shorter and shorter. eventually you turn the control knob to the point where the green indicator light comes on, and the flexion stops.

This indicates that the up strokes have been shortened to the point where it converges with the down stroke, causing the motion to halt. To restart the flexion, turn the Up control clockwise until the indicator light is off.

The same will occur when turning the down control too far counterclockwise, causing it to converge with the up stroke.

Pelvic Cushion Flexion - Distraction

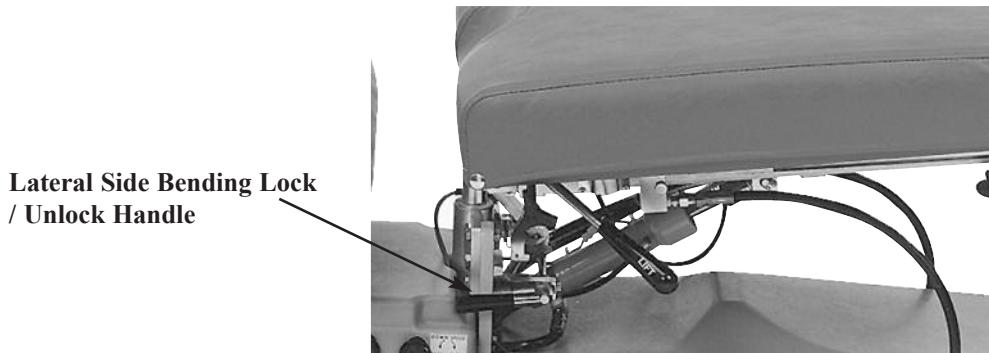

Up Delay Feature

The Up delay adjustment knob controls the amount of time the pelvic cushion stays in the highest set position from 0 to 30 seconds. Simply turn the knob clockwise to increase the delay.

Down Delay Feature

The down delay adjustment knob controls the amount of time the pelvic cushion stays in the lowest set position from 0 to 30 seconds. Simply turn the knob clockwise to increase the delay.

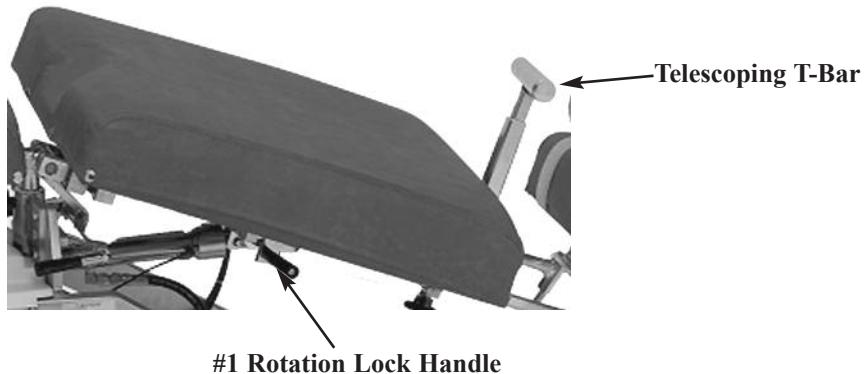

Pelvic Lateral Side Bending

To Operate Lateral Side Bending Feature:

1. Turn the Lateral Side Bending Handle up, to allow the pelvic cushion to laterally bend
2. The cushion can be locked at various angles of side bending, laterally moving the cushion in position and locking the handle down.

Pelvic Rotation & T - Bar

Pelvic Rotation (Optional)

To Unlock the Pelvic Rotation

1. Support the edge of the pelvic cushion.
2. Pull up and slide the Rotation Lock Handle (No. 1) towards the rear of the table to unlock.

To lock the Pelvic Rotation

1. Place the Pelvic Cushion into it's horizontal position.
2. Slide the Lock Handle (No. 1) forward to lock.

Telescoping T-Bar (Optional)

To Change the height of the T-bar

1. While T-Bar is revealed and locked into position simply pinch the red lever against the T-Handle to elevate or lower. Release red lever when desired height is obtained.

To reveal Telescoping T-Bar

1. Simply pivot the handle up until it locks into place. (Fig. 1)

To hide Telescoping T-Bar

1. Pivot the T-Bar down until it is in full horizontal position. (Fig. 2)

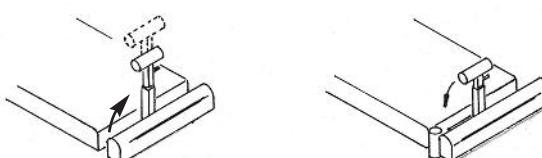

Fig. 1

Fig. 2

Ankle Rest

Ankle Rest Adjustment

To Extend or Retract the Ankle Rest

1. Loosen the Horizontal Lock Knob (No. 1) and slide the cushion to the desired length.
2. Once the cushion is adjusted, tighten the lock knob.

Vertical Ankle Rest

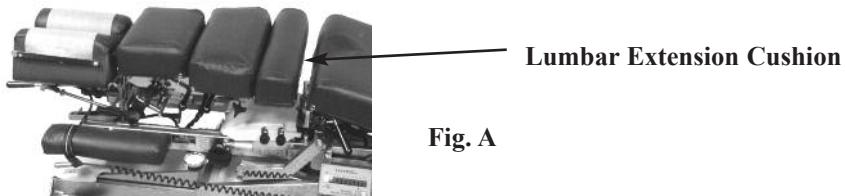

To Raise the Ankle Rest

1. Simply lift on the sides of the Ankle Rest Cushion.
2. Once the desired height is obtained the cushion will automatically lock into position when released. 

To Lower the Ankle Rest

1. From the back end of the table, support the center of the Ankle Rest Cushion with the right-hand.
2. With left hand, slide the Vertical Lock Lever (No. 2) towards the left  to release lock.
3. Lower the cushion to desired height, and release the Vertical Lock Lever to lock into place.

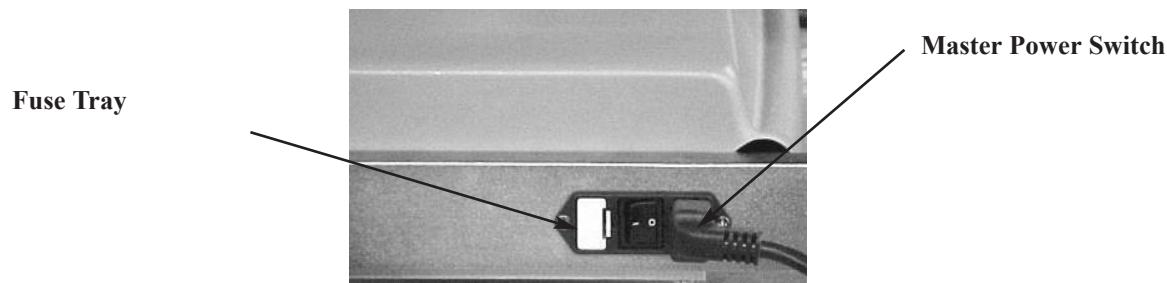

Lumbar Extension Cushion

The Lumbar Extension Cushion is designed to fill in the gap between the chest and pelvic cushions when table is extended for tall patients.

Lumbar Extension Cushion rods can be inserted into the lower chest (A) as shown above.

Master Power Switch

The Master Power Switch is located on the front left side of the base frame. The switch is operated by pushing on the left or right side, marked with a zero or dash. Once the power is on, select a Height Button to activate power to the table (Height Select Panel).

A. ON is indicated with a dash (-)

B. OFF is indicated with a Zero (0)

WARNING: WHEN THE TABLE IS NOT IN USE OR DOCTOR IS AWAY FROM THE TABLE, THE POWER SWITCH SHOULD BE TURNED OFF.

Power Switch Fuses

WARNING: UNPLUG THE POWER CORD FROM THE ELECTRICAL WALL OUTLET BEFORE REMOVING THE FUSE HOLDER TO AVOID INJURY.

A fuse holder tray is located next to the power switch and can be removed by pushing along the right side. Replace fuses with the same size rating.

Foot Pedal Control

Directional Pedal (Black)

The directional pedals have the dual function of raising and lowering table in elevation. The directional pedals can be operated in manual and auto mode.

Manual Mode - The table is set in the manual mode whenever the electrical power is turned on. In the manual mode; the height of the elevation or tilt of the table can be adjusted with the foot pedal or with the directional switches on the panel. The table will stop when the pedal or panel switch is released. If the Auto / Manual (No. 2) green light is on, it must be depressed to operate in manual mode.

Auto Mode - Pressing the auto / manual switch (No. 2), illuminates the green light and activates the table in the auto mode. The directional switch or pedal can be released and the table will continue to run a full cycle or to a pre-selected height.

Lower Switch (No. 3)

The Lower Switch (No. 3) lowers the table from a horizontal position.

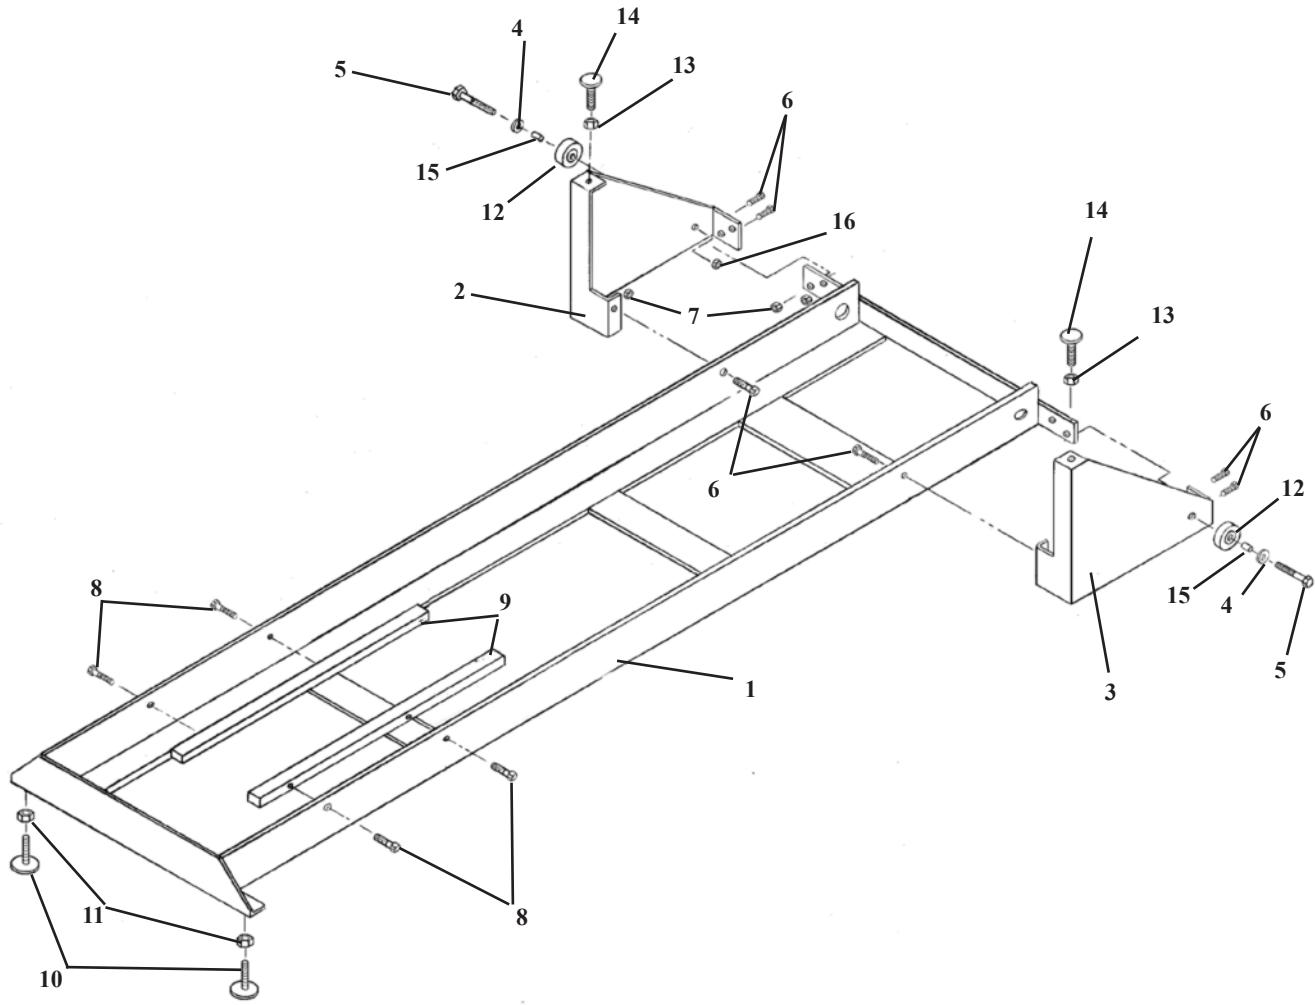

Elevation Switch (No. 4)

The ElevationSwitch (No. 4) raises the table to a higher position.

Beeper / Mute Switch (No. 5)

Used for turning the beeper sound on or off. The beeper provides an audible sound to indicate that a command was given to the main logic board.
